# Deribit account

Updated 8 months ago

## Configuring your Deribit account

To configure your Deribit account to connect to Fireblocks:

1. Refer to the [Deribit.com API Documentation](#) to learn how to generate a new API key.
2. When prompted to do so, name your new API Key "Fireblocks."
3. After you confirm the validity of your new API key, copy and keep a record of both the Access Key and Access Secret. You will need them when connecting this exchange to your workspace.
4. When creating the new key, make sure you toggle these options as follows:
  - **Account:** read\_write
  - **Block trade:** none
  - **Trade:** read
  - **Wallet:** read\_write
  - **Custody:** none
    - Enable **read\_write** if you plan to use Deribit Off Exchange
5. Restrict API access and whitelist the following IP address: **52.76.208.129**
6. Make sure 2FA is enabled on your Deribit account. This is required to connect this account to Fireblocks.

### Note

Deribit Off Exchange is a separate service that requires a different configuration. [Learn more about Deribit Off Exchange.](#)

## Configuring Fireblocks

1. In the Fireblocks Console, go to **Accounts > Connected accounts**.
2. Select **+ Connect Account**.

 Fireblocks Help Center

- b. **Access Key:** Enter the Access key that you saved from Deribit.
- c. **Access Secret:** Enter the Access secret that you saved from Deribit.
- d. **Two-Factor Token:** Enter the 2FA token you copied from Deribit.
- e. Select **Connect Account**.

The [Admin Quorum](#) must approve the new account to make it available for new transfers from your workspace.

Your Deribit account appears on the Exchanges page along with all managed assets and their balances. Following Admin Quorum approval, transfers are available from your vault accounts, whitelisted addresses, Fireblocks P2P Network connections, and other connected exchange accounts to your Deribit account.

## Troubleshooting

### Why is my withdrawal from Deribit stuck on Broadcasting?

#### Deribit requires email approval for all withdrawals

- If you have not approved the email, try approving the transaction.
- If it is still stuck, initiate a new transaction and retry the approval process, as the approval email has most likely expired.

### Add new security key

Set a unique name for the 2FA key.

TEST

Change name

The first key you create will be assigned to all managements: account management, login management and wallet management. You can choose any name for your security key, for example: FirstKey, WalletKey, AccountKey.

### Configure the app

Open the 2FA app and add your account by scanning the QR code below. If you cannot use a QR code, enter this text code: **DM7D** **13VUUA**

- If you receive an "invalid third party response" notice when attempting to withdraw from Deribit, it likely means two-factor authorization (2FA) is not defined for Deribit. To resolve this, copy the 2FA token from Deribit and paste it into the Fireblocks platform as shown in [step 3 of the Deribit account guide](#).
- If you still have difficulties, contact [Fireblocks support](#).
