Exporting CVA deposit addresses

Updated 6 months ago

Deposit addresses for CVAs can be found using the main workspace, and not the collateral workspace. You can export deposit addresses for an individual collateral exchange account or all connected collateral exchange accounts at once.

Follow these steps to export CVA deposit addresses from your main workspace.

1. Go to the Exchanges tab in your Fireblocks Console.
2. Select the three-dot menu next to the exchange account you want to export addresses from and select **Export addresses**.

4. The requested CVA deposit addresses are retrieved, and you will receive an email with the export link.
5. The email contains a link to the collateral vault account report. The download link to this file expires after 7 days. Download the CSV file to view details similar to the standard [vault addresses export](#). This includes:
 - Asset details
 - Deposit address details
 - HD paths
