Interacting with gasless contracts

Note

The gasless service is a premium feature currently in limited release, while tokenization is a premium feature that requires an additional purchase. If you don't have access to either of these features, contact your [Customer Success Manager](#) to discuss having them enabled in your Fireblocks workspace.

Interacting with gasless contracts is similar to interacting with any deployed contract in Fireblocks.

For example, suppose you want to mint tokens from a gasless contract. Follow these steps:

1. After deploying the gasless contract, select **More Actions (...)** > **Manage contract** to view the contract functions.
2. Hover over the row for the mint function, and select **Use**.
3. Make entries for the function's parameters as necessary.
 - In the example below, 100 tokens are being minted from and to the minter account, which is the Default vault account.
4. Select **Submit**. You can now sign the transaction using your mobile device.
