Intermediary setup for Smart Transfers

Updated 8 months ago

If you want to open a ticket for two third parties as an intermediary, you can do so via the API. To open a ticket for your third parties, they need to be connected to each other with the same network profiles that are connected to you on the Fireblocks P2P Network. You can then open the ticket as an intermediary and follow its progress using the Console or the API.

[Learn more about creating Smart Transfer tickets as an intermediary via the API.](#)

Note

While opening the ticket is only possible via the API, all parties may view, approve, fund or cancel the ticket via the Console or the API.
