Smart contract management

Linking existing tokens and smart contracts

Note

Tokenization is a premium feature that requires an additional purchase. If you don't have access to this feature, contact your [Customer Success Manager](#) to discuss having it enabled in your Fireblocks workspace.

Overview

In the Fireblocks Console, you can link existing tokens and smart contracts on the Tokenization page. Linking means connecting tokens and contracts deployed outside of Fireblocks to your workspace. This allows you to operate and manage these items from the Tokenization page.

Linking tokens allows you to use the Console to perform tokenization functions, such as minting or burning, for tokens issued elsewhere. You can also link custom smart contracts to use for your Tokenization efforts. All your linked smart contracts will appear as a template option when creating new tokens.

Linking existing tokens

1. On the Tokenization page, select **Link existing**.
2. Select **Token** (fungible) or **NFT/SFT** (non-fungible/semi-fungible), and choose the token's blockchain. Then either select the token from the dropdown list or enter the token's contract address.
3. Select **Link token** to link your token. If the token's contract doesn't include an ABI, you must select one of the following before you can link the token:

 Fireblocks Help Center

/

- **Add ABI:** Select this to paste the ABI code to the contract for the token you're linking.

Linking custom smart contracts

1. On the Tokenization page, select **Link existing**.
2. Select **Token utility**, choose the blockchain where your smart contract is deployed, and then enter your contract's address.
3. Select **Link token utility** to upload your smart contract. Select **Add ABI** to paste the ABI code for the contract you're linking.
