Managing your Movement account on Fireblocks

Updated 6 months ago

Warning

- Fireblocks Raw Signing has limited Policy capabilities; hence, the user needs to take all required measures to reduce any security risk.
- You are responsible for validating and securely managing transaction flows. Contact the Fireblocks team to get information about Raw Signing security best practices.

Overview

Fireblocks does not currently support Movement or other Aptos-based blockchains, so assets such as MOVE are not natively supported. This guide outlines a dedicated solution for managing Movement transactions with Fireblocks, utilizing Fireblocks' Raw Signing capability and a purpose-built SDK.

This solution abstracts the complexity of Movement operations, allowing developers and users to effortlessly initiate transactions, monitor balances, and track transaction history with minimal implementation overhead.

Our solutions

The Movement solution offers two options for interacting with the SDK. Both options share the same prerequisites and infrastructure. The UI interacts with the same SDK backend and supports the same features.

Prerequisites

- [Fireblocks Raw Signing feature enabled](#)
- [Fireblocks API user](#)
- [Policy rule in place](#)

The Movement-Fireblocks SDK enables developers to:

- Fetch the Movement account address and public key for a Fireblocks vault account ID.
- Retrieve the Movement account balance for both the base asset and tokens.
- Retrieve detailed information on all coins owned by the account.
- Create base asset and token transactions on Movement: the SDK will build the transaction, send it for signing in your Fireblocks account, and submit it to the blockchain behind the scenes.
- Retrieve transaction history for all transactions sent and received by the account.

Option 2: Desktop UI application

Recommended for non-technical users, this Electron-based local application provides an intuitive interface to:

- View vault accounts and balances
- Create and sign transactions
- Monitor transaction history

Installation & Setup

1. Enable Raw Signing

2. Configure the policy

3. SDK setup

4. Using the desktop app
