Policy rules for automation actions

Updated 5 months ago

Note

Automation is a premium feature that requires an additional purchase. If you don't have access to this feature, contact your [Customer Success Manager](#) to discuss having it enabled in your Fireblocks workspace.

Automation rule actions are initiated by the automation user. Therefore, you must configure a Policy rule that allows the automation rule user to initiate transactions.

1. In the Fireblocks Console, go to **Policies** in the left navigation panel, then select a Policy type.
2. Add or edit a rule in the Policy Editor.
3. When [building the rule](#), select **Automation user** as your Initiator and choose your [Co-Signer](#) as the Designated Signer.
 - Alternatively, you can add the automation user to an existing group of authorized initiators instead of as a standalone initiator.
4. Select **Add rule**. The rule appears in your policy. If necessary, use the up and down arrows on the policy's left side to change the rules' order in accordance with the first-match principle.
5. Select [Publish policy](#), review your changes, then submit the changes to your Admin Quorum and Owner, or assigned approval group, for approval.
