Setting token prices

Overview

In Fireblocks, you can set prices for any fungible tokens you own on the Tokenization page. Prices for tokens you've issued using the Tokenization feature can be set directly within the Fireblocks Console. Only workspace Owners, Admins, Non-Signing Admins, and Editors can set token prices.

If you deployed the token contract externally or linked it via the Tokenization page, you can set its price by contacting [Fireblocks Support](#).

Token prices are denominated in USD and can be updated at any time. Prices are only reflected within Fireblocks workspaces and will not appear on external platforms. If a public price becomes available for the asset, you will no longer be able to set the price for it in Fireblocks.

How to set token prices

To set a token's price in the Fireblocks Console, go to the Tokenization page and select **More Actions (...)** > **Set token price**.
