[Fireblocks Help Center](#)[Tokenization](#)[Overview](#)

The Tokenization Page

Overview

The Tokenization page in the Fireblocks Console lets you view and manage the lifecycle operations of your tokens, including minting, burning, transferring, and issuing new tokens. It also shows detailed information about your tokens and a list of vault accounts holding each token.

Note: This is a premium feature that requires additional purchase and enablement by Fireblocks Support. If you're interested in this feature for your workspace, contact your Customer Success Manager.

Supported blockchains and standards

On the Tokenization page, you can view tokens on:

- EVM-compatible blockchains
- Ripple
- Solana
- Stellar

Tokens list

The Tokenization page shows the tokens you have issued or linked in your workspace. Each token includes the following data:

- **Name:** The token's name.

/

tokens only.

- **Contract address:** The token's contract address. Appears for EVM-based tokens only.
- **Holders:** A list of vault accounts holding the token.

Managing tokens

You can manage your tokens throughout their entire lifecycle from the Tokenization page.

Issue new tokens

You can issue EVM, Ripple, and Stellar tokens on the Tokenization page. Select **Add token** to [issue a new token](#).

Link existing tokens

If you want to manage a previously issued token using the Console and it doesn't appear on the Tokenization page, you can link it. Linking a token lets you view and manage it on the Tokenization page.

To link an existing token:

1. On the Tokenization page, select **Add token**.
2. Select **Link an existing token**.
3. Choose the token you want to link, then select **Link token**.

You can unlink tokens by selecting **More actions** > **Unlink token**. Unlinked tokens are removed from the Tokenization page, but you can re-link them at any time.

Mint and burn tokens

You can use your Console to [mint and burn tokens](#) listed on the Tokenization page. Select **Mint** or **Burn** to perform either operation.

Manage smart contracts for EVM-based tokens

You can manage the smart contracts used for your EVM tokens. Select **More actions** > **Manage contract** to view and interact with the [smart contract's read and write functions](#).

Add wallets for holding tokens

Don't see what you're looking for? Log in for the full Help Center experience

You can transfer tokens listed on the Tokenization page. Select **Withdraw** to transfer the token to another asset wallet in your workspace.

View the token's address

Select **See Deposit Addresses** to view the issuer address for Ripple and Stellar tokens, or the smart contract address for EVM-based tokens.
