Unknown Destination notice in multi-destination transactions

Updated 5 months ago

Default vs. Legacy behavior for multi-destination transactions

Visit [this help center article](#) to learn more about multi-destination transaction behavior.

Up until recently, when conducting a multi-destination transaction, the Console reflected its destination as “Unknown”.

As a result, we performed the following steps:

1. Added a new multi-destination type.
2. When a multi-destination transaction is now initiated, the destinationType is correct and no longer “none”.
3. In the future, we plan to update all historical multi-destination transaction records with the new destinationType.
