Using a workspace as a gasless relay provider

Updated 3 months ago

Overview

Any workspace can be configured to provide gasless relay services. Such dependent workspaces may belong to you or other Fireblocks customers you have agreed to provide with relay services. Relay workspaces must be configured to use an API Co-Signer.

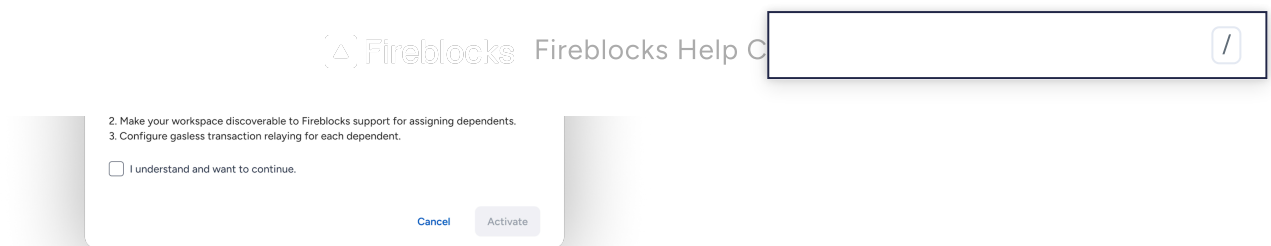

How to use a workspace as a gasless relay provider

Fireblocks customers may contact you to request relay services. Once you have agreed to provide this service, Fireblocks Support connects your relay workspace to the customer's gasless-dependent workspaces. All dependent workspaces appear in your gasless transaction relay settings panel, as described below.

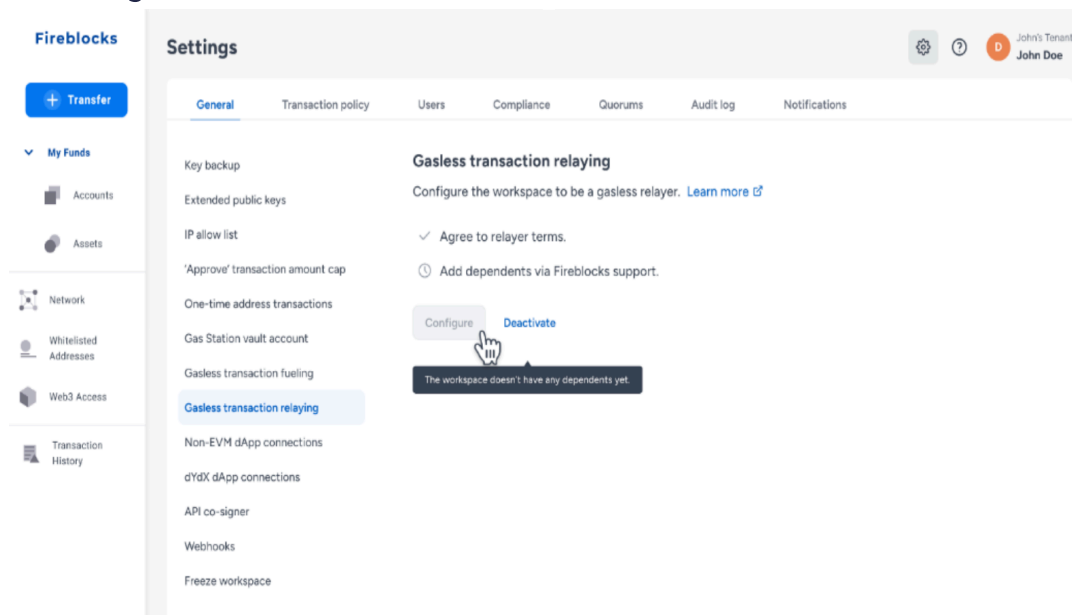

To configure gasless relay service settings:

1. In the Fireblocks Console, navigate to **Settings**  > **General** > **Gasless relayer**.
2. Select **Activate**.
3. On the confirmation dialog, select the **I understand and want to continue** checkbox, then select **Activate**.

4. After the activation is completed, the Gasless relayer page updates to the following:

Policy rules for gasless relay operations

Relay workspaces require Policy rules that allow transactions initiated by a Gasless Orchestrator and designate an API Co-Signer as the signer for all gasless transactions.

Enable gasless relay services for each dependent workspace

Select the vault account in your workspace that will be assigned to each dependent workspace. You can use a single vault account for all dependent workspaces or separate vault accounts according to your preferences.

Activating a gasless-dependent workspace

Once Fireblocks Support connects your relay workspace to a new gasless-dependent workspace, this workspace will appear in your relay settings panel and allow you to pick a vault account from which to service this workspace. You may serve many dependents from a single vault account or create a vault account for each.

Disabling gasless relay services

You can suspend services by toggling off “relay services” or toggling support on or off the dependent workspace level:

Deactivate gasless transaction relaying?

Users from {0} dependent workspaces will be unable to make gasless transactions from any vault accounts or embedded wallets.

You can reactivate the relay with your current configuration at any time.

Gasless relay service reports

All gasless relay transactions serviced by your workspace are reported with all relevant details. You can produce reports for each dependent workspace for invoicing and accounting purposes.

To download a transaction report for a specific workspace:

1. In the Fireblocks Console, navigate to **Settings**  > **General** > **Gasless configuration**.
2. Find the workspace you want to generate a report about, then select **Download** from the transaction list column to save a CSV file.
